## Unit 14 Multiplicative reasoning:

| Objective | Sparx Task |  |
| :--- | :--- | :--- |
| Recall speed formulae and use to find variables (or <br> proportional reasoning) | U753 <br> U865 |  |
| U610 |  |  |
| Interpret and understand distance/time graphs | U403 <br> U914 |  |
| Recall and use formulae for density. Link to volumes <br> work. | U910 |  |
| Recall and use formulae for pressure | U527 |  |
| Convert between different compound units. | U256 |  |
| Substitute into the various kinematics formulae | U144 |  |
| Use percentage as an operator (profit, loss, repeat <br> percentage change, original amounts) | U286 |  |
| Use compound interest | U332 |  |
| Use a variety of measures within proportion problems <br> (e.g. currency, rates of pay) | U256 |  |
| Understand types of proportion (direct/inverse) and <br> start to interpret growth/decay problems | U721 |  |

## REVISION Unit 6 Shapes and Angles:

| Objective | Sparx Task |  |
| :--- | :--- | :--- |
| Understand and use properties of triangles and <br> quadrilaterals | U628 <br> U732 |  |
| Measure, draw and estimate angles using a protractor | U447 |  |
| Apply simple angles rules such as angles on a straight <br> line, around a point and vertically opposite angles. | U390 <br> U730 |  |
| Understand and use angle sum for a triangle and <br> quadrilateral | U329 |  |

| Understand and use the parallel line angles rules | U826 |  |
| :--- | :--- | :--- |
| Recognise and name polygons. Understand regular <br> and irregular polygon properties | U427 |  |
| Apply interior/exterior angles in polygons |  |  |
| Solve mixed angle problems |  |  |

## Unit 12 Pythagoras and Trigonometry:

| Objective | Sparx Task |  |
| :---: | :---: | :---: |
| Use Pythagoras' theorem in 2D | U385 |  |
| Apply Pythagoras in different contexts such a coordinate geometry and with a range of shapes and units |  |  |
| Recall the trigonometric ratios for Sine, Cosine and Tangent | U605 |  |
| Use trig to find a missing length in a right angled triangle | U283 |  |
| Use trig to find an angle in a right angled triangle (includes angles of elevation/depression) | U545 |  |
| Solve problems using trigonometry/Pythagoras that incorporate other aspects of the syllabus such as area and perimeter. |  |  |
| Know the exact trig angles for $0,30,45,60$ and 90 for all three trig ratios (excluding tan90) | U627 |  |
